Forcepoint

# 3 Keys to Securing Data Everywhere

Unified Management Across All Channels

Forcepoint Enterprise DLP offers unified policy control that manages channels from one single policy. With just a few clicks, simplify policy configuration by applying new or existing policies across all Forcepoint ONE SSE channels. Unified reporting for DLP incidents gives you an intuitive, single view of all incidents across all channels. Centralized DLP forensics for CASB, SWG and ZTNA provides full forensic artifacts of all data exfiltration attempts upon upload/download/share/chat across all channels.

Cloud · Web · Private Apps · Endpoint · DLP Policies Managed by FSM · Email · Network

Robust Enforcement Everywhere

With more out-of-the-box DLP classifiers, policies and templates than any other provider, Forcepoint Enterprise DLP provides robust enforcement everywhere. With just a few clicks get full access to all 1600+ out-of-the-box classifiers, policies and templates. Forcepoint enables granular policy enforcement from the endpoint to the cloud and web.

Powerful Enterprise DLP Data Identification Across All Channels

Leverage machine learning to effectively recognize unstructured data and Natural Language Processing (NLP) for unsurpassed accuracy recognizing common data types. Advanced file type detection identifies over 900 file types regardless of renaming. Additionally, Forcepoint's industry leading PreciseID Fingerprinting ingests directly from structured and unstructured files. It creates a unique digital signature to represent the ingested file, bringing highly confident detection to identify, monitor and protect sensitive information.
