Emerson Process Management Finds and Controls Regulated Data with Forcepoint

Emerson Process Management was able to get started with Data Loss Prevention up to 75% faster than expected, delivering better visibility to data movement, more effective detection and breach prevention, and regulatory compliance with Forcepoint DLP.

Challenges

→ Policies that were too complicated and too much headcount was required to maintain them.
→ Data exfiltration left the organization exposed.
→ Need to control and manage data that's subject to regulation.

Approach

→ Chose Forcepoint DLP to help easily find and control regulated data and sensitive IP by:
  • Scanning files and discovering data they didn't know existed.
  • Setting data loss prevention policies across network and endpoint one time, from a single console.

Results

→ Better visibility to data movement within the business, and more effective detection and prevention of breaches.
→ Gained the ability to ensure regulatory compliance.
→ Forcepoint DLP's ability to automate policy enforcement based on user behavior:
  • Provided one-time-only user access.
  • Minimized disruption to users.
  • Lowered the call volume to support.
→ Helped the company get started with data loss prevention 50-75% faster than expected.
