# Forcepoint ONE Data Security Endpoint Edition

Secure Your Data in the Digital Age

In today's digital landscape, data security is paramount. We present to you Forcepoint ONE Data Security Endpoint Edition, a cloud-native solution designed specifically for mid-size to large organizations that prioritize data security.

Our DLP SaaS solution, deployed on the endpoint, safeguards sensitive information, prevents data breaches and enables compliance with privacy regulations worldwide.

Industry-Leading Speed and Efficiency

Unlike competing solutions, Forcepoint ONE Data Security Endpoint Edition can be deployed to hundreds of thousands of endpoints in just minutes. This time to value stands out in a landscape of traditional complex solutions that often feel like shelfware. Simply deploying doesn't drive efficacy, therefore Forcepoint has built a unique architecture that provides for the fastest policy management architecture in the industry, enabling near real-time policy changes and DLP incident alerts.

Simplified Deployment and Management

Forcepoint ONE Data Security Endpoint Edition offers more out-of-the-box policies, templates and classifiers than any other leading DLP solution (over 1,700), simplifying and streamlining initial deployment and ongoing management. It also protects data regardless of network connectivity. Whether endpoints are connected to the network or off the network, Forcepoint ONE Data Security Endpoint Edition enforces actions and prevents data exfiltration. Deploy, configure, enforce. Keep your data and your users safe.

Risk-Adaptive Protection

Democratization of data means enabling access to many. However, not all users are the same. Forcepoint ONE Data Security Endpoint Edition offers easy integration with Forcepoint Risk-Adaptive Protection, a machine learning algorithm capable of understanding and differentiating user behavior so organizations have the ability to detect risky behavior in real time. The behavior is analyzed by user for each security incident alert, and then the solution automates policy actions that are informed by that specific user's risk. With Forcepoint Data Security Endpoint Edition, both DLP incidents and user risk can be seen and managed from a single interface.
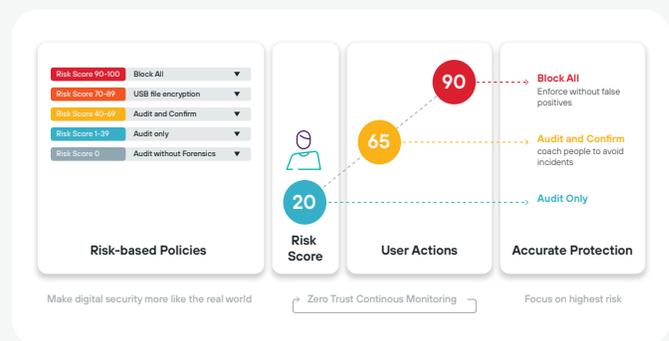

Reduced Costs and Increased Productivity

Efficiently protecting an organization's use of their data is often considered aspirational. Forcepoint ONE Data Security Endpoint Edition makes the challenges of "always on, anywhere" data protection attainable. Forcepoint provides all this so that customers can reduce costs with efficient DLP deployment and management, reduce false positives with modern techniques and streamline compliance through secure handling of private data with out-of-the-box data identifiers covering privacy regulations for over 150 regions globally. Experience the future of data security with Forcepoint ONE Data Security Endpoint Edition. Your data deserves the best protection. Choose Forcepoint ONE Data Security Endpoint Edition today!
