# See. Secure. Simplify.
Forcepoint Data Security Posture Management

Powered by GetVisibility

The ultimate proactive solution for comprehensive visibility and control of business data across multiple clouds and on-prem.

Are you aware of your data risk?

The digital age brings data everywhere. Organizations struggle to keep pace with the sprawl across multiple cloud platforms and on-premises storage. This complex landscape creates significant challenges: You can't protect what you can't see. Many lack insight into where sensitive data resides, who can access it and how it's used. Data breaches loom large, especially with vast amounts of unknown "dark data" (up to 80 percent of an organization's data) lingering on systems. In addition, data privacy regulations are becoming increasingly strict. Organizations need to be able to demonstrate compliance to avoid fines and reputational damage.

Forcepoint Data Security Posture Management (DSPM) – your solution to data risk

Forcepoint DSPM tackles these challenges and empowers you to control your data security posture. It offers proactive data risk discovery and remediation, allowing you to identify and fix security risks associated with dark data before attackers exploit them. Leveraging AI with machine learning to continuously boost its accuracy, Forcepoint DSPM discovers and classifies data across your cloud and network environments with superior accuracy. Additional key capabilities let you:

→ Fix data security issues quickly and efficiently with built-in automated remediation tools.

→ Gain clear visibility into data ownership and location with simplified data access management, streamlining the process of granting appropriate access permissions.

→ Reduce the risk of costly data breaches by proactively identifying and remediating data security risks.

→ Streamline compliance reporting, allowing you to generate reports that demonstrate compliance with data privacy regulations.

→ Combine with Data Loss Prevention (DLP) and Risk-Adaptive Protection (RAP) for a complete data security approach that we call Data Security Everywhere, delivering full visibility and control of data across its lifecycle, wherever it resides.

Contact us today to learn more about how Forcepoint DSPM can help you achieve complete data security.
