Wipro Data Discovery Using Forcepoint

Identify sensitive data using market-leading technology

The Benefits:

› Be completely ready for auditors at any time

› Ensure wide DLP coverage

› Simplify deployment and management

› Create customer policies to prevent data loss

› Manage accidental or malicious misuse of data

The Challenge

In today's modern organization, data has proliferated and spread out across multiple locations. With the advent of COVID and the hybrid workforce, large amounts of data are spread across multiple cloud locations, on-prem file servers, and email servers as well as individual devices. Digital transformation has also gained speed and, with it, an exponential quantity of data that organizations are responsible for. This has led to what is widely recognized as "dark data" – huge amounts of data not being used daily but needing to be retained for compliance purposes. Getting ahead of all this data is a key concern for data security professionals as they look to protect data everywhere it exists while remaining in compliance with increasingly strict regulations.

Our Solution

Forcepoint DLP Discover provides the solution to dark data. Using advanced techniques, Forcepoint DLP Discover simplifies the process of locating, classifying, and protecting all types of sensitive data. Through Forcepoint's discovery scanning tools, organizations can gain visibility into all data everywhere it resides across various locations within the organization. Discovery policies can be created with rules which when matched can implement an action plan associated with the rule. Action plans can include running remediation scripts as needed. Once the scan is completed, a report can be run to see all the incidents that were triggered during the scan, including information on location, data types, and file properties. Data also can be moved to preferred locations to keep it secure either manually or through a predefined policy. Scans can be run at intervals set by the organization to meet the individual business requirements.

Wipro Data Discovery Solution

Wipro Data Discovery partnered with Forcepoint DLP Discover offers a complete data discovery solution to identify and protect sensitive data to help organizations stay in compliance. Data discovery enables organizations to create data catalogs categorized via regulatory metadata tags which help them meet privacy mandates like GDPR and CCPA. Once Discovery is enabled, proper protection can be applied on sensitive data using varied data protection controls. The repository can also add value to organizations by making it available through data democratization efforts uncovering new insights in business value creation.

Wipro Data Discovery Services Overview

Consulting and Assessment

1. Consulting
› Understand organizational needs
› Discuss benefits and challenges of data discovery
› Design policies

2. Assessment
› Conduct interviews with data owners (Data Officer, DBS, Privacy Officer, Legal, CISO, Data Retention Office, Legal, BTS/IT) for more comprehensive data discovery

3. Gap Analysis
› Review current state environment, understand gaps, and challenges

Guided Implementation

1. Planning
› Develop an understanding of data governance processes
› A plan to perform in-depth data discovery

2. Policy Configuration
› Implement policies for data discovery
› Discover data across varied data sources

3. Discovery Execution & Testing
› Regular execution of discovery scan of content locations

Managed Services

1. Managed Services
› 24x7 managed services powered by Wipro
› On-board data sources
› Platform upkeep

2. Policy Optimization
› Create new policies based on new scan results and requirements

3. Data Discovery Reporting
› Create Data Discovery reports for multiple scans and data stores
